Vegetation in the vicinity of the Toolik Field Station, Alaska

**Explanation**

The vegetation map is a composite of a series of maps made by the USGS, the Minnesota Natural Heritage Program, and the research team at the University of Alaska Fairbanks. The map provides a detailed view of the vegetation types and distributions in the vicinity of the Toolik Field Station. The vegetation types are grouped into several categories such as tundra, shrub tundra, and herbaceous vegetation. The map also includes information on the location of roads, disturbed areas, and high-centered ice-wedge polygons.
